Acumen Data Systems Model-101 Time Clock

The Model-101 time clock is simple and easy to setup and use. It comes preconfigured with all the functions needed to collect employee time and attendance. Simple plug and play to with your time and attendance software.

Reliable Biometric Fingerprint Clocking (Optional)

Acumen's Model 101 features true plug-and-play biometric fingerprint clocking that helps eliminate buddy punching and employee overpayment for late punches or extra breaks. The Model 101 also features Fast Clocking to speed employee Punches. If you have standard shifts where employees typically clock in or out, you can set the terminal to stay in the In or Out screen.

Advanced Clocking

The Model 101 offers many employee self-service functions that can't be found elsewhere. Employees can request a day off, view time off approvals, view total hours worked for the pay period, view their last activity, and view their current department, job, task, and status - all directly from the terminal.

Easy Integration

With plug-and-play configuration, the Model 101 is one of the easiest employee time clocks to integrate. The employee time clock comes standard with four USB2 ports, Ethernet, and optionally WiFi.

Real Time

Unlike competing products the Model 101 is a real-time terminal. Transactions are interactive with the host for validation and messaging. The employees will not get out of sync with the host status. Requests are posted in real-time.

Easy Configuration

The Model 101 accepts configuration data from a simple file loaded on a memory stick. Configuration of host connection URL and Wifi passwords are easily entered without use of cryptic keyboard commands found in competing products.
